

The Internet of Things and Interconnectivity in Retail Spaces

1

DOOR

Monitoring technology at the door alerts employees when customers enter/exit and tracks store traffic data.

2

MOBILE DEVICES

Consumers can now use apps to augment their experience inside the store.

4

SECURITY SYSTEMS

Cameras and other theft prevention methods work together in order to maximize security efforts and deter theft from both internal and external sources.

3

MERCHANDISE SECURITY TAGS

Items in the store can be tagged with digitally registered devices to deter theft.

5

FITTING ROOMS

Employees can effectively and safely manage the use of fitting rooms using IoT software.

6

SCANNER

Scanners record and compile valuable purchase data.

7

AUTOMATED CASH MANAGEMENT WITH TIDEL SMART SAFES

Cash is no longer a payment method isolated from the digital age. Smart Safes are uniquely designed to connect easily into IoT infrastructures, fostering a smooth integration with digital environments. The generation of real-time data makes the smart safe the best partner and complement to data-driven IoT strategies, allowing businesses to not only keep customers happier, but also to improve supply chain capabilities, and open new revenue streams.

To optimize your cash management environment, and start utilizing systems that can easily integrate into your IoT infrastructure, please visit us at [Tidel.com](https://www.tidel.com).
